

The dijit.Editor xss

In source edit mode input xss payload `<svg onload="alert(document.domain)">`, and view, there is alert box

The first screenshot shows the dijit.Editor demo in source edit mode. The URL is `demons.dojotoolkit.org/demos/editor/demo.html`. The editor's source code is visible, and the payload `<svg onload="alert(document.domain)">` is highlighted with a red box. The payload is inserted into the HTML content of the editor.

The second screenshot shows the same demo in view mode. The payload has been rendered, and an alert box is displayed with the text `demons.dojotoolkit.org` and a button labeled `确定` (Confirm).
